

Dual Uplinks One-key CCTV

Local-storage Convenient Access of Outside Network

UTP3-SW08-TP120(A1)
Innovative design: DUAL 1000Mbps uplink ports
Double gain: match well with both local storage and outside network access

1 Innovative DUAL 1000Mbps uplink ports

Innovative dual 1000Mbps uplink ports design. One piece of switch is a set of small-size surveillance transmission system meets the access needs of HD security cameras, local NVR storage, managed switch, and outside network devices.

2 One-key CCTV Mode

Extends transmission distance up to 250m; VLAN function realizes the communication insulation among ports, ensures a higher forwarding efficiency and securer system; Auto-identify and narrow network storm to 2M or lower, maintain a safe and stable network.

3 RJ45 ports with flattened pins design

Rj45 ports with 30u gold-plated flattened pins, which increase the contact surface and resistance to oxidation. The design improves electrical performance and reliability.

4 PoE Standard 250m

Adopt high power output, Max. 30W for each port, Meet power supply needs of most cameras and network access devices. Although fully connected with PoE cameras at night, the switch can realize 250m long-distance transmission and PoE+ power supply.

5 Security-exclusive More stable

Super lightning protection & anti-interference design ensures a stable and reliable operation environment for devices under weak wells or complicated security projects.
